**SUMMARY**

- The Cedar Bluff and Stanwood 7.5' quadrangles are located in north-central Iowa, covering approximately 560 square miles.
- The map is a result of cooperative efforts between the Iowa Geological Survey and the Natural Resources Conservation Service (NRCS).
- It provides surficial geologic information useful for landowners, planners, and engineers.

**GEOLOGIC CROSS SECTION A-B**

- The section illustrates the geologic stratigraphy and topography of the area.
- It shows the relationships between different geologic units and the river course.

**LEGEND**

- Soil colors denote various soil types and their characteristics.
- Water bodies are represented by blue lines.
- Natural features, such as bluffs and river courses, are indicated.

**CONTRIBUTIONS**

- Contributions from numerous individuals and organizations are acknowledged in the credits section of the map.

**ACKNOWLEDGEMENTS**

- Special thanks are extended to donors and contributors whose support made this project possible.

---

The map and cross section are based on interpretations of the best available information at the time of publication. Further refinement and improvement of the map is anticipated as additional information becomes available.
